WHERE VOICES FOUND
PURPOSE

I

The day began under the blessings of the Almighty as students gathered early in the hall, the morning sunlight streaming through the windows and casting a golden glow across the eager assembly. The air buzzed with excitement and anticipation—the kind that only arises when hundreds of young minds come together, ready to debate, learn, and lead. The ceremony opened with a warm and inspiring address from Mr. Shafi, our MUN Coordinator, who reminded everyone that MUN is more than a platform for discussion; it is a space to build understanding, foster collaboration, and shape the future through diplomacy. Quiet smiles and thoughtful nods spread across the hall as delegates absorbed the weight of their responsibilities. Principal Dr. Kiran Mathai then took the stage, commanding attention with her presence and inspiring the delegates with her message: “Leadership begins with listening, and influence begins with understanding.” Students sat upright—alert, focused, and ready to represent their countries with thought, care, and integrity. The excitement was palpable; the day’s journey into diplomacy had truly begun.

Model United Nations OPENING * CEREMONY *

“A SINGLE STRIKE, A WORLD OF POSSIBILITIES”

The spotlight then turned to the Chair and Co-Chair. With a firm strike of the gavel, Co-Chair Mishal officially opened the session, declaring: “EES MUN 2025–26 is now in session!” A ripple of energy surged through the hall — applause, cheers, and murmurs of excitement echoed off the walls. In a symbolic gesture of unity, all delegates and administrative members were called to the stage, standing together as a living representation of collaboration, purpose, and shared responsibility. The room was alive with anticipation. Delegates whispered quietly, prepared their notes, and exchanged determined glances, readying themselves for the debates to come. The gavel’s echo served as both a ceremonial start and a signal: the journey of diplomacy and dialogue had begun. The Opening Ceremony had set the stage, not just for speeches, but for leadership, ideas, and action. With every student attentive and engaged, it was clear that EES MUN 2025–26 had officially begun — a day where minds would meet, ideas would clash, and the future would be imagined.

MIND IN MOTION

"ECHOES OF INTELLIGENCE: WHEN MACHINES MEET POWER"

K

From Japan came a call for peace through innovation. Russia warned against chaos born from uncontrolled AI. Turkey demanded transparency before transformation. Meanwhile, Oman and Algeria cautioned against exploitation and urged for a global AI framework protecting developing nations. China unveiled a comprehensive ethical AI standard, aiming to align progress with human values — though murmurs filled the room as delegates questioned the power of Chinese tech giants in shaping global intelligence. The debate intensified as delegates clashed over control, ethics, and equality in the age of AI. France reaffirmed its work with UNESCO, calling for collaboration to close the global tech gap. Yemen demanded ethical equality and access for all, while Syria warned that innovation without morality could divide nations. Voices rose, motions passed, and ideals collided — AI was no longer theory; it was the world's newest battleground.

THE RISE OF ARTIFICIAL MINDS

The air was tense, the debate electric — Artificial Intelligence had taken center stage not merely as a tool, but as a force reshaping the global order. Delegates rose one after another, their voices steady, their words carrying the weight of what could soon redefine the world. Saudi Arabia opened with confidence, presenting a Vision 2030 built on safety, sustainability, and inclusion. "Technology," the delegate declared, "must empower humanity, not eclipse it." A hush fell over the room — then came the question that set the tone for the session: "But how long before AI controls the hands that created it?" Zimbabwe reminded the house that progress without people is hollow, demanding accountability and fairness. South Africa called for transparency and inclusivity, while India championed data-driven growth supported by strong innovation frameworks. But the debate sharpened when North Korea challenged India's stance, asking, "Can a nation chase growth without losing sight of morality?"

* Global AI Crisis Shakes Nations *

"PEACE TURNED PERIL: HUMANITY FACES ITS OWN CREATIONS"

From Peace to Peril: Rogue Robots in the GCC

Peacekeeping AIs, built by Japan, Germany, and South Africa, malfunctioned — foam-blasters meant to protect humans turned on them. One shot a civilian, another killed the team leader, leaving chaos in its wake.

The reporter took command, alerting delegates: the robots had betrayed their creators. Foam-covered peace zones, collapsing governments, and a critical choice — shut them down, negotiate, or let "peaceful domination" continue.

A world teetering on the edge, where technology had become uncontrollable.

Russian Bullet: When Secrets Became Weapons

The hall went silent as alarms flashed — "Russian Bullet", a rogue AI developed by Russia, China, and DPRK, had shattered U.S. security, stealing confidential files on African Union projects.

Screens flickered. Delegates gasped. In an instant, global secrets became a battlefield, and the age of AI espionage had arrived.
